

SECURING WAREHOUSES

STRONGER SECURITY, SMOOTHER OPERATIONS

Securing warehouses and distribution centers is vital for combating loss prevention, workplace violence, and operational inefficiencies. Boon Edam's secured entry solutions provide a proven strategy for preventing unauthorized access, ensuring employee safety, and improving operational workflows.

PREVENT UNAUTHORIZED ACCESS

Deploying security entrances at key entry and exit points ensures that only authorized personnel access critical areas. Features like access control, tailgating prevention, and automated screening create a secure environment while streamlining operations.

ENHANCE WORKPLACE SAFETY

Security entrances act as a deterrent against workplace violence and internal threats, safeguarding employees and assets. By automating access control, organizations reduce the need for manual supervision and associated costs, creating a safer and more cost-effective workplace.

COMBAT SHRINKAGE & LOSS PREVENTION

Effective loss prevention starts with controlling facility access. Security entrances reduce theft risks by screening employees and visitors during entry and exit. Solutions such as randomized exit screening and integrated monitoring provide a strong defense against shrinkage and internal collusion.

OPTIMIZE ENTRY AND EXIT WORKFLOWS

Strategic workflows improve efficiency & security through:

- **Perimeter Security:** Full-height turnstiles with tailgating prevention and access control.
- **Employee Screening:** Metal detectors and divestment lockers ensure secure entry.
- **Break Tracking:** Waist-high turnstiles monitor employee movement.
- **Exit Screening:** Randomized turnstiles deter theft and prevent unauthorized inventory removal.

SECURED ENTRANCES DELIVERING TANGIBLE ROI

Boon Edam solutions help reduce labor costs and shrinkage, often delivering a return on investment in less than eight months for facilities operating 24/7. Advanced features like biometrics and AI analytics, further enhance security while providing actionable insights.
